

Test Report

User Management & Authentication Module — Restaurant Review Platform

1. Scope

This report covers manual testing of the User Management & Authentication module, which handles registration, email verification, login/session management, password recovery, user profile editing, and role-based authorization (Guest, Registered User, Reviewer, Moderator, Admin). Testing was performed manually.

2. Test Environment

- Backend: Node.js with Express
- Database: PostgreSQL
- Frontend: Server-rendered EJS templates, plain CSS, vanilla JavaScript
- Testing method: Manual functional testing via browser, one test case per row below

3. Test Cases and Results

All test cases below were executed manually and passed as expected.

ID	Area	Test Case	Expected Result	Status	Notes
TC-01	Registration	Submit sign-up form with valid name, email, password, and ToS accepted	Account is created; user is directed to the "Check your inbox" verification screen	Pass	Password hashed with bcrypt before storage
TC-02	Registration	Submit sign-up form with an email that is already registered	Form is rejected with a descriptive error: "An account with that email already exists"	Pass	No duplicate row created in database
TC-03	Registration	Submit sign-up form without accepting the Terms of Service checkbox	Form is rejected with error: "You must accept the Terms of Service..."	Pass	Validated server-side, not just in the browser
TC-04	Registration	Submit sign-up form with a password under 6 characters	Form is rejected with a minimum-length error	Pass	
TC-05	Registration	Upload and crop a profile photo during sign-up	Cropped image is saved and displayed as the account avatar	Pass	Client-side canvas crop, no external library
TC-06	Email Verification	Click a valid, unexpired verification link	Email is marked verified; user sees a "Welcome" confirmation screen	Pass	
TC-07	Email Verification	Click a verification link after the 24-hour expiry window	User sees an "expired link" message with an option to resend	Pass	Token expiry enforced at the database query level
TC-08	Email Verification	Request a new link via "Resend verification"	A new token is generated and the old one is invalidated	Pass	
TC-09	Authentication	Log in with correct email and password	Session is created; user is redirected to their profile page	Pass	Session persisted in PostgreSQL, not in-memory

ID	Area	Test Case	Expected Result	Status	Notes
TC-10	Authentication	Log in with an incorrect password	Login is rejected with "Invalid email or password"	Pass	Same message used for unknown email, to avoid leaking which emails exist
TC-11	Authentication	Attempt to log in to a banned account	Login is rejected with an account-suspended message	Pass	
TC-12	Authentication	Log out, then attempt to access /profile directly	User is redirected to the login page	Pass	Confirms session was properly destroyed
TC-13	Authentication	Visit /login or /register while already logged in	User is redirected straight to their profile instead of seeing the form	Pass	Prevents a confusing logged-in view of the sign-up/login pages
TC-14	Password Management	Submit "Forgot password" with a registered email	A time-limited reset link is generated	Pass	Link shown on screen in place of a real email service
TC-15	Password Management	Submit a new password and a mismatched confirmation field	Form is rejected with "Passwords do not match"	Pass	Validated on both client and server
TC-16	Password Management	Complete password reset with matching, valid passwords	Password is updated; user can log in with the new password	Pass	
TC-17	User Profile	Edit name, bio, and location and save	Updated values persisted and displayed on reload	Pass	
TC-18	User Profile	View profile with an unverified email	A banner appears prompting the user to resend the verification email	Pass	
TC-19	Authorization & Roles	Log in as Admin and visit /admin	Admin dashboard loads, listing all users	Pass	
TC-20	Authorization & Roles	Log in as a Registered User and visit /admin directly	Access is denied	Pass	Role check enforced in server-side middleware
TC-21	Authorization & Roles	Change a user's role via the admin dropdown	Role updates immediately and is reflected in their profile badge	Pass	Supports Registered User, Reviewer, Moderator, Admin
TC-22	Authorization & Roles	Ban a user, then attempt to log in as that user	Login is blocked with a suspension message	Pass	
TC-23	Authorization & Roles	Unban a previously banned user	User can log in normally again	Pass	

ID	Area	Test Case	Expected Result	Status	Notes
TC-24	Guest Access	Visit the home page without logging in	Page loads and displays a guest-appropriate message, no forced redirect	Pass	
TC-25	Guest Access	Attempt to visit /profile without logging in	User is redirected to the login page	Pass	

4. Summary

Total test cases executed: 25

Passed: 25 Failed: 0

All core functionality across registration, email verification, authentication, password management, profile editing, and role-based authorization performed as expected during manual testing.

5. Known Limitations

- Email verification links are displayed on screen for demo purposes rather than sent via a real email service.
- No login rate-limiting or brute-force protection is implemented.
- Only one seeded admin account exists; there is no account-recovery path if it is lost.
- Automated/unit tests were not written for this module; all testing above was performed manually.

6. Conclusion

The User Management & Authentication module meets its functional requirements. All 25 manual test cases passed, covering the full user lifecycle from registration through role-based access control.
